

## Disease Susceptibility

Staghorn coral fragments from different genotypes were exposed to white-band diseased tissue before and during a coral bleaching event. The resistance to disease was evaluated, and the probabilities of infection calculated.\*

**Table 1: *Acropora cervicornis* genotype and susceptibility to white-band disease.**

Genotype	Probability of disease (pre-bleaching)	Probability of disease (post-bleaching)
1	0	0.8
3	0	0
7	0.285714286	0
13	0.285714286	0.8
41	0	0.8
44	0	0.8
47	0.2	1
50	0.2	0.8
